In Scope

- Daily mood logging with a simple rating scale and optional journal entry
- Trend visualization dashboard showing mood patterns over time (weekly/monthly graphs)
- Customizable check-in reminders or notifications at user-set times
- Crisis resource surfacing - automatically display hotline numbers or emergency contacts when a user logs a severe or concerning mood entry
- Optional Data - sharing feature allowing users to export or share their mood history with a therapist or a trusted contact

Out of Scope

- Real-time messaging or chat functionality with licensed therapists (since this is a self-tracking tool, not a telehealth platform)
- AI-based clinical diagnosis or automated mental health assessment
- Integration with a wearable device for biometric data collection
